

China used high-tech electronic cat named to the Acting way off rats and cockroaches, flies, mosquitoes and other pests by the various national patent environmental products.

Acting current products "QC101 type" "black cat • Tom" card microcomputer control deworming device series, the electronic-control devices, ultrasound-mouse devices, the acoustic mousetrap, the sound-control devices, machine - cockroach electronic repellent device, the electronic smoking mosquito machines automatically catch fly planes, and so forth.

The main presentation "QC101 type", "black cat • Tom" card microcomputer control deworming device serial products.

QC101 type electronic deworming device has passed UL, CE, and other studies in 2000 by U.S. electronic consumer products ranked second best good results.

QC101 type electronic devices in domestic sales, deworming, named "black cat • Tom" brand, trademark "black cat • Tom" card. It is efficient, high-performance off pests new products. The products user-friendly, inter-rat, also off cockroaches and other pests to the best effect - rat.

Then, what QC101 series products unique to maintain their leading counterparts independence, the market witnessed? What advantages the product itself?

First, this is a world of advanced it industry (computer hardware and software) products manufacturing technology and a new generation of technology integration deworming innovative products. It microcomputer control can produce multiple scanning frequency conversion pulse electromagnetic and ultrasound composite frequency conversion, frequency conversion because export frequency electromagnetic pulse is wide, not only with traditional electronic deworming devices can send electromagnetic, ultrasonic and infrared effective frequency, but also issued a simulated electronic technology manufactured products amounted to less than the frequency, deworming could produce the best results.

Secondly, the goods and simple to use ultrasonic pest expulsion of different products, ultrasound shortcomings encountered objects to be returned, but not penetration, rats and other pests just like in the dispute, the corner where hiding, where ultrasound is powerless, and the goods are able to take advantage of the electromagnetic wave will be those walls, deep pests away, Also available composite frequency conversion ultrasound to drive those in the open areas of rats and pests.

Moreover, the materials used and the same electromagnetic and ultrasound compared to deworming products, since the use of more advanced micro-computer digital technology, thus the use of simulation techniques than those products either from consistency, stability and effectiveness of the use or value.

Also, because the products have the electromagnetic wave and frequency conversion ultrasound in microcomputer controlled automatically be continued intermittent changes, and thus do not allow rats and other pests have "immunity" and "adaptive".

And this product is also used bionics principles in the field recording a variety of rats were killed when Wang's pitiful yell sound, the high-tech processing, leaching polychlorinated sensitive and fear to be enlarged again feature automatic intermittent broadcast, where the voice market for

rats constantly living in a "terrorist" and feel inferior environment of its fidgety skills, physical disorder and fled the scene. In mid-November 2004 and early September 2005, CCTV CCTV1 and CCTV10< approached science "programs to the" rat-recorded "on the subject of bionics-mouse device products offered by coverage!

In summary, since QC101 series deworming (Rat) on the use of a variety of modern high-tech deworming (Rat) methods, which could produce the best deworming (Rat) results. So this product is the world's most advanced, integrated, the most powerful an electronic deworming device is a major breakthrough in the control of rodents and pests!

Shanghai-based products do Preventive Medicine Research Institute "deworming effect on the scene-rat" checking project monitoring report concludes that : "based on SCDC/ZY (XZ) S196-2001 China-mouse device on the evaluation criteria, microcomputer deworming device conditions on the ground-control applications have good results." (The 4701 Shanghai pre-6558 word article).

China-Po (Jiangsu) laboratories, Jiangsu Province electronic products seized control of the products of the market strong electromagnetic radiation (known), the pilot testing of the two test security, test the conclusions of the report are qualified. (Su-2003 word article 004GZ D).

The two products have national Patent Office issued patent latest technology. Of the patent are : utility model patent, design patent ZL 02 2 21127.6; of ZL 02 3 49262.7.

The China Pacific Insurance Company products by product liability insurance underwriting. Policies of : ANAJK0107104B000013W.

QC101-W2 microcomputer-controlled rodents (cockroach) devices

Welcomes You become a "black cat • Tom" family, very pleased you chose this paragraph microcomputer-controlled rodents (cockroach) devices. This is a use of the world's advanced it (computer hardware and software) to create a new generation of technology and technology integration deworming innovative products. Is a pest control of rats and cockroaches and other major breakthroughs. Use of this product can effectively prevent and remove rodent and other pest

in your life and work to bring trouble and harm.

First, working principles :

This series of products formed by the two self-contained control system Benpinke to simultaneously launch electromagnetic, ultrasonic, particularly - Rat (cockroach) worked best.

1, electromagnetic wave : it by the Zhendangqi fully embedded in micro-computer controlled using the latest "current musings mobile" technology can produce multiple scanning frequency conversion electromagnetic wave through the home or building electrical circuits launched, along indoor power transmission lines for all walls or buildings interlinked wires are issued pulse electromagnetic wave, can stimulate mouse (cockroach) category of the nervous system and other pests, the pest from the corner of a wall, ceiling Lane rush out.

2, ultrasound :

it by the Zhendangqi fully embedded in micro-computer controlled to produce multiple-frequency conversion ultrasound, ultrasound fired frequency conversion surrounding ultrasound signals when it encountered objects will be reflection, and thus to the entire room filled with the rats and cockroaches, spiders, ants and other pests and hearing the central nervous system of multiple interference it feels discomfort, panic anxiety, and even show hysterical, convulsion and other symptoms, and can make them lose their reproductive capacity, forcing their flight in situ, thereby reaching out pests purposes.

Second, the use of methods :

That the products are installed or used equipment, if you will deworming devices plug into power (AC/220V) sockets, the green light is flashing. The products began. Electromagnetic pulse frequency conversion design for the operation of three minutes, the closing three minutes. Frequency conversion in a composite ultrasound. Deworming (rat, cockroach) beginning to show results in 2-4 weeks. In continuous use for four weeks, to the best deworming (rat, cockroach) results. But if you pests rampant there (of course, we hope not), which may last several weeks before full effect.

Third, the use of products

This product can-mouse, but also drove cockroaches, centipede, spiders, bedbugs, fleas, and other pests, particularly rodents - cockroach-effects best. - Rat effective range of up to 150 sq m (open to). The products tested by the relevant state departments for human, animal-friendly, other household appliances to prevent, widely used in household, warehouses, restaurants, shops, offices, hospitals, supermarkets, restaurants, food factories, tobacco plants, pharmaceutical plants, fodder plants, pharmaceutical companies, distribution systems etc.. This product non-toxic, tasteless and will not kill the pest, not a secondary pollution is your trustworthy green products. This product can be a useful life of 10 years.

Main technical parameters :

- 1, type : QC101-W2
- 2, the use of voltage : 220V-240V/50 HZ;110V/60HZ;
- 3, power : not the Yedeng on 6-watt, 8 watts on the Yedeng
- 4, export frequency : 20kHz - 55kHz
- 5, rat-effective coverage : 150 square metres and above (open to)

QC101-W3 microcomputer-controlled rodents (cockroach) devices

Welcomes You become a "black cat • Tom" family, very pleased you chose this paragraph microcomputer-controlled rodents (cockroach) devices. This is a use of the world's advanced it (computer hardware and software) to create a new generation of technology and technology integration deworming innovative products. Is a pest control of rats and cockroaches and other major breakthroughs. Use of this product can effectively prevent and remove rodent and other pest in your life and work to bring trouble and harm.

First, working principles :

Using the latest "current musings mobile" technology.

Can also emit electromagnetic wave, the second wave, the focus remove pests such as rats

Working principles : in microcomputer controlled electromagnetic wave through the home or building electrical region launched, along indoor power transmission lines for all walls or buildings interlinked wires are sent electromagnetic pulse can stimulate post and other pests of the nervous system, the pest from the corner of a wall, ceiling Lane rush out;

At the same time the application of fake goods acoustic theory, the wave function switches contain issued (rats were killed when the pitiful yell Wang Sheng), and cover the entire space, so that takes away lives fear rats, thus accelerating the rats flee.

In mid-November 2004 and early September 2005, CCTV CCTV10< approached science "programs for bionics-mouse device products offered by coverage!

Thereby effectively area reaching 150 sq m (open to). One must use a floor.

Capable inter-rat, also expelled centipede, cockroaches, spiders, fleas, and other pests, particularly rodents-the best results.

Capable deworming beginning to show results in 1-4 weeks. In continuous use for four weeks, to the best deworming (Rat) results.

Protection devices containing electronic spillover effect to prevent overheating and energy

spillover.

Capable non-toxic, tasteless and will not kill the pest, not a secondary pollution is your trustworthy green products.

Unit for the family, warehouses, restaurants, shops, offices, hospitals, supermarkets, distribution systems and rodent serious region.

Unit frequency conversion, the gap and will not allow rats and other pests have "immunity" and "adaptive". The unit is used for lighting Xiaoyedeng.

Main technical parameters :

1, namely : QC101-W3;

2, the use of voltage : 220V-240V/50 HZ;110V/60HZ;

3, power : power : not the Yedeng on 6 kilowatts, the Yedeng on 8 watts;

4, export frequency : 20kHz - 55kHz;

5, effective coverage : 150 square metres and above (open to);

6, weight : 0.1 kg;

QC101-W2 microcomputer-controlled rodents (cockroach) devices Price : 35USD

QC101-W3 microcomputer-controlled rodents (cockroach) devices Price : 40USD
